IBM Docket No. BOC9-2000-0004

Response dated Sep. 1, 2005

Reply to Office Action of June 1, 2005

Docket No. 6169-149

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the instant application:

**Listing of Claims:**

1. (Previously Presented) A method for presenting database query results through an audio user interface (AUI), comprising:  
initiating a database query operation, said operation retrieving a plurality of database query result items from at least one database; and,  
presenting each said query result item through the AUI as each said query result item is found in said at least one database, said presenting step occurring concurrently with said database query operation.
2. (Original) The method of claim 1, further comprising:  
detecting a speech response through the AUI during said presentation, said speech response selecting said query result item presented through the AUI; and,  
responsive to said detection, terminating said database query operation.
3. (Original) The method of claim 2, further comprising:  
detecting a command during said presentation to terminate said database query operation; and,  
responsive to said detection, terminating said database query operation.
4. (Original) The method of claim 3, wherein said command is a speech command.

Docket No. 6169-149

5. (Original) The method of claim 1, further comprising:  
inserting each result item in a data structure as each query result item is found;
6. (Original) The method of claim 5, wherein said presenting step comprises:  
presenting each query result item contained in said data structure independently of  
but concurrently with said database query operation.
7. (Original) The method of claim 1, wherein said data structure is selected from  
the group consisting of a list, a stack, and a database.
8. (Original) The method of claim 1, wherein said AUI is a telephony interface.
9. (Original) A system for presenting database query results through an audio user  
interface (AUI) comprising:  
a database manager for managing a database query operation on at least one  
database, said database query operation producing database query result items; and,  
a dialog manager for managing the presentation of said database query result items  
through the AUI concurrently with said database query operation.
10. (Original) The system of claim 9, wherein said AUI comprises:  
a text-to-speech processor for converting said database query result items into  
audible speech; and,  
a speech recognition engine for converting speech input into text recognizable by  
said dialog manager.
11. (Original) The system of claim 10, wherein said AUI further comprises:  
a barge-in facility.

Docket No. 6169-149

12. (Original) The system of claim 9, further comprising:  
a queue for storing database query result items from said database query operation;  
and,  
a queue manager for managing the insertion and removal of database query items to and from said queue.
13. (Previously Presented) A machine readable storage having stored thereon a computer program for presenting database query results through an AUI, said computer program having a plurality of code sections executable by a machine for causing the machine to perform the steps of:  
initiating a database query operation, said operation retrieving a plurality of database query result items from at least one database; and,  
presenting each said query result item through the AUI as each said query result item is found in said at least one database, said presenting step occurring concurrently with said database query operation.
14. (Original) The machine readable storage of claim 13, further comprising:  
detecting a speech response through the AUI during said presentation, said speech response selecting said query result item presented through the AUI; and,  
responsive to said detection, terminating said database query operation.
15. (Original) The machine readable storage of claim 14, further comprising:  
detecting a command during said presentation to terminate said database query operation; and,  
responsive to said detection, terminating said database query operation.

Docket No. 6169-149

16. (Original) The machine readable storage of claim 15, wherein said command is a speech command.
17. (Previously Presented) The machine readable storage of claim 13, further comprising:  
inserting each result item in a data structure as each query result item is found.
18. (Original) The machine readable storage of claim 17, wherein said presenting step comprises:  
presenting each query result item contained in said data structure independently of but concurrently with said database query operation.
19. (Original) The machine readable storage of claim 13, wherein said data structure is selected from the group consisting of a list, a stack, and a database.
20. (Original) The machine readable storage of claim 13, wherein said AUI is a telephony interface.
